Data Aggregation Service: Created a full stack service to visualize last mile delivery data. Created a Typescript React frontend with Polaris styling that calls an AWS backend implemented with Java Lambda Functions, API Gateway, S3, and Internal Amazon Services. Used S3 Select and Spark to filter through about 1TB per query. Deployment/Observability Pipeline: The service is built with the AWS Typescript CDK. It is validated with unit

and integration testing before being deployed through CodeDeploy and monitored with CloudWatch alarms and SNS.
